The Coastal Change Analysis Program (C-CAP) is a nationally standardized database of land cover and land change information, developed using remotely sensed imagery, for the coastal regions of the U.S. Descriptions of the land cover classes used for C-CAP land cover mapping projects can be found at: http://www.csc.noaa.gov/crs/lca/tech_cls.html Land cover classes were collapsed from the original C-CAP categories into the generalized categories of developed, cultivated, upland forest, forested wetland, non-forested wetland, salt marsh, bare, and water.
